

# Product name: SSB 334 ... (1/3)

TRA Code:

## Application: Skid Steer

### Specially designed Block Pattern:

- Suitable for Paved as well as field (loose soil) operations.
- Designed to work efficiently in Construction applications as well as field applications like almond harvesting

### Rim Guard protection:

- Prevents the tire from sidewall impacts

### Robust Construction:

- Higher load-carrying

### Cut & Chip Tread compound:

- Longer Tire Life & protection from cuts & chips

### Optimum distribution of rubber and grooves:

- Enhanced traction & optimum heat dissipation
- Uniform wear & better tire life

## List of sizes and technical information

SKU CODE	Size	Tire Type	Rim	Unloaded Dimension		SLR	RC	PR	LSI	NSD (32nds)	Weight (LBS)

### SSB 334 – MACHINE DEMAND: Almond Harvester

- Self-propelled machine requiring a single operator
- Hydraulic suspension, with individual height settings for each wheel
- Fold-down system for easy transportation ent-->
- The coupling onto the tree and shaking, gathering, and de-shelling occur continuously without the machine having to stop
- The time spent shaking depends on the ripeness of the fruit.
- Harvest speed of 5 to 6 trees per minute

### MACHINE DEFINATION:

Self-propelled machine requiring a single operator. The coupling onto the tree and shaking, gathering and de-shelling of the almonds occurs continuously without the machine having to stop. This ensures a rapid and effective harvest. The shaking is controlled by a timer, ensuring the almond falls only if it is ripe.

### SSB 334 APPLICATION – Almond Harvester

## Product name: SSB 334 ... (3/3)

---

### SSB 334 – MACHINE DEMAND:

- This piece of equipment can perform many jobs including dozing, grading, digging, lifting, land clearing, and transporting materials around any site
- It's a small but versatile piece of machinery primarily used for grading and moving material in the Dirt World
- They are also great machines for snow removal in the winter season
- They are machines with high maneuverability at low speeds

### MACHINE DEFINITION:

Skid-steer loaders are typically four-wheeled or tracked vehicles with the front and back wheels on each side mechanically linked together to turn at the same speed, and where the left-side drive wheels can be driven independently of the right-side drive wheels. Unlike conventional vehicles, the wheels on a skid steer have no separate steering mechanism and are fixed in a straight line relative to the body of the machine. The machine turns by skidding or dragging its wheels across the ground, hence the term "skid steer."

### SSB 334 APPLICATION – Skid Steer
